                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Data from AC079810 and AC073128 was used to finish this clone, AC009974. Polymorphisms have been identified between AC073128 AC009974. A single plasmid region exists between 38812-38903. unresolved tandem in the HERV SVA exists between 184390-185163. PCR suggests that approximately 1700 bps are missing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   VECTOR: DBACE3.6

VECTOR: DBACE3.6

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-1077K22; the clone sequenced to the right is RP11-64705. Actual start of this is at base position 1 of RP11-459119; actual end is at base position 206854 of RP11-459119.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               donor, as described by Oscegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality > 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SOURCE INFORMATION:

Submitted (17-JAN-2001) Genome Analysis, Institute of Molecular Blotechnology, Beutenberstr. 11, Jena 07745, Germany

NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mus musculus chromosome 1 clone PAC510; PAC457, *** PROGRESS ***, 3 unordered pieces.

The variation may occur in exons 3, 4 or 10. In exon 3 variation may be a substitution of a G for a C at nucleotide 320, resulting in the amino acid substitution P71A; in exon 4 variation may be a substitution of a T for a C at nucleotide 550; and in exon 10 variation may be a substitution of a T for a C at nucleotide 1037, resulting in the amino acid substitution R340W. There may also be nucleotide variation

Detecting the presence of the PRKAG3 DNA, or a variant, is useful in determining a risk estimate of a metabolic disease, such as diabetes or obesity, in a subject. The variation may occur in exons 3,4 or 10. In exon 3 variation may be a substitution of a G for a C at nucleotide 320, resulting in the amino acid substitution P71A; in exon 4 variation may be a substitution of a T for a C at nucleotide 550; and in exon 10 be a substitution of a T for a C at nucleotide 550; and in exon 10 resulting in the amino acid substitution R71A; in exon 4 variation may be a substitution of a T for a C at nucleotide 1037, resulting in the amino acid substitution R71A; in exon 4 variation acid substitution R71A; in exon 50; and in exon 10 nucleotide variation in intron 6. The numbering of these variations is based on the full length cDNA as given, rather than on position 1 of the open reading frame.
       Human AMPK gamma subunit muscle-specific isoform, PRKAG3 cDNA

                                                                                                                                             useful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of PRKAG3. Transgenic animal and host cell transformed with PRKAG3 or a heterotrimeric AMPK consisting of PRKAG3 or its mutant, are useful for screening compounds able to modulate AMPK activity. Nucleic acid encoding PRKAG3 is useful for detecting mutations in a Prkag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain of PRKAG3 and is useful in gene therapy.
                                                                                                                                                                                                                                                              evaluation, genetic testing and prognosis of a metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRKAG3, are
                                                                                                                                                                                                                                                                                                        useful as therapeutic for treating carbohydrate metabolism disorders as diabetes, obesity, and disorders associated with muscle metabolism such as myopathy and cardiovascular diseases, to modulate AMPK activity, and for restoring a normal AMPK function. PRKAG3 sequence and its functionally altered mutants are useful for the diagnostic
                                                                                                                                                                                                                                                                                                                                                                             The present sequence is a cDNA encoding human adenosine monophosphate (AMP)-activated kinase (AMPK) gamma subunit muscle-specific isoform, PRKAG3. Mutation in prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is
                                                                                                                           Sequence

compounds

able to modulate AMPK activity

```
CC (AMP) activated kinase (AMPK) gamma subunit muscle-specific isoform, CC complete PRKAG3. Mutation in Prkag3 results in an altered regulation of CC carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is CC useful as therapeutic for treating carbohydrate metabolism disorders such CC as diabetes, obesity, and disorders associated with muscle metabolism Such as myopathy and cardiovascular diseases, to modulate AMPK CC activity, and for restoring a normal AMPK function. PRKAG3 sequence CC and its functionally altered mutants are useful for the diagnostic CC evaluation, genetic testing and prognosis of a metabolic disorder, CC preferably a carbohydrate metabolism disorder. Primers that can detect CC a genetic polymorphic marker linked to a sequence encoding PRKAG3, are CC useful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of PRKAG3 or a consisting of PRKAG3 or its mutant, are useful for screening campands while to modulate a marker that the consisting of PRKAG3 or its mutant, are useful for screening campands while to modulate a marker of the consisting of prkAG3 or its mutant, are useful for screening campands while to modulate a marker of the consisting of prkAG3 or its mutant, are useful for screening campands while to modulate a marker of the consisting of prkAG3 or its mutant, are useful for screening campands while to modulate a marker of the consisting of prkAG3 or its mutant, are useful for screening campands while to modulate a marker of the consisting of prkAG3 or its mutant, are useful for screening campands while to modulate a marker of the consisting of prkAG3 or its mutant, are useful for screening campands while to modulate a marker of the consisting of prkAG3 or its mutant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAD03320
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a cDNA encoding human adenosine monophosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New variants of the gamma subunit of vertebrate adenosine monophosphate-activated kinase for diagnosis or treatment associated with energy metabolism such as diabetes, obesit

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a cDNA encoding pig adenosine monophosphate CC (AMP)-activated kinase (AMPK) gamma subunit muscle-specific isoform, CC PRKAG3. Prkag3 gene is located in the RN locus of chromosome 15.

CC Mutation in Prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is useful as CC diabetes, obesity, and disorders associated with muscle metabolism cs. Such as myopathy and cardiovascular diseases, to modulate AMPK CC and its functionally altered mutants are useful for the diagnostic evaluation, genetic testing and prognosis of a metabolic disorder, CC are ferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRKAG3. are CC useful for detecting a dysfunction of carbohydrate metabolism for carbohydrate metabolism of a functionally altered allele of PRKAG3. CC Transgenic animal and host cell transformed with PRKAG3 or a heterotrimeric AMPK consisting of PRKAG3 or its mutant, are useful for screening compounds able to modulate AMPK activity. Nucleic acid can a sequence encoding PRKAG3 is useful for detecting mutations in a Prkag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain XX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is a cDNA encoding pig adenosine monophosphate CC (AMP)-activated kinase (AMPK) gamma subunit muscle-specific isoform, cc complete PRKAG3. Prkag3 gene is located in the RN locus of chromosome CC 15. Mutation in Prkag3 results in an altered regulation of carbohydrate CC metabolism, particularly in skeletal muscle. PRKAG3 is useful as the carbohydrate metabolism disorders such as cC therapeutic for treating carbohydrate metabolism disorders such as cC diabetes, obesity, and disorders associated with muscle metabolism CC such as myopathy and cardiovascular diseases, to modulate AMPK CC activity, and for restoring a normal AMPK function. PRKAG3 sequence and its functionally altered mutants are useful for the diagnostic cevaluation, genetic testing and prognosis of a metabolic disorder, CC preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRKAG3, are cuseful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of PRKAG3. are CC in a sequence and host cell transformed with PRKAG3 or a cold cencoding PRKAG3 is useful for detecting mutations in a Prkag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain cold prkaG3 and is useful in gene therapy.

```
CC kinase (AMPK) gamma subunit muscle-specific isoform, PRKAG3 splice of contraint DNA. Prkag3 gene is located in the RN locus of chromosome 15. CC Mutation in Prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is useful as CC therapeutic for treating carbohydrate metabolism disorders such as CC diabetes, obesity, and disorders associated with muscle metabolism CC such as myopathy and cardiovascular diseases, to modulate AMPK CC activity, and for restoring a normal AMPK function. PRKAG3 sequence CC and its functionally altered mutants are useful for the diagnostic cc evaluation, genetic testing and prognosis of a metabolic disorder, CC preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRKAG3 are cuseful for detecting a dysfunction of carbohydrate metabolism resulting CC from the expression of a functionally altered allele of PRKAG3. are CC from the expression of a functionally altered allele of PRKAG3 are CC from the expression of a functionally altered allele of PRKAG3. CC from the expression of a functionally altered allele of PRKAG3 or a metabolism resulting CC form the expression of a functionally altered allele of PRKAG3 or a metabolism resulting CC functional practice and host cell transformed with PRKAG3 or a sequence encoding the for detecting mutations in a Prkag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain of PRKAG3 and is useful in gene therapy.

The invention relates to antisense inhibitors of genes essential to CC prokaryotic cellular proliferation, their use in identifying the CC genes, their use in the discovery of novel antibiotics, the essential CC genes themselves and the encoded proteins. The prokaryotes used are CC Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella CP pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The CC invention is also useful for the identification of potential new targets CC for antibiotic development. The antisense nucleic acids can also be used CC indentify proteins used in proliferation, to express these proteins. CC and to obtain antibodies capable of binding to the expressed proteins. CC The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen CC for homologous nucleic acids which are required for cell proliferation in CC a wide variety of organisms. The present sequence encodes an CC essential prokaryotic cellular proliferation protein.

CC Note: The sequence data for this pattent did not form part of the printed specification, but was obtained in electronic from wire only hombicable.

                                                                                                                                                                                 The invention relates to isolated polynucleotide (I) and C polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II) are thereby techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or GU (II). (II) is useful for generating antibodies against it, detecting or GU (II). (II) and its binding partners are useful in medical inaging of sites expressing (II). (I) and (II) are useful for treating CC inaging of sites expressing (II). (I) and (II) are useful in medical CC inaging of sites expressing (II). (I) and (II) are useful for treating CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed content of the sequence of the invention.

                                                                                                                                                                                           cc polyniciectifes are also used in diagnostics as expressed sequence tags cf or identifying expressed genes. (1) is useful in gene therapy techniques ct to restore normal activity of (11) or to treat disease states involving cc (11). (11) is useful for generating antibodies against it, detecting or cc a food supplement. (11) and its binding partners are useful in medical cc imaging of sites expressing (11). (1) and (11) are useful for treating cc disorders involving aberrant protein expression or biological activity. Cc diagnostics, forensics, gene mapping, identification of mutations in creating cc responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and cc amino acid sequences. AAS64197-AAS94564 represent novel human cc specification, but was obtained in electronic format directly from WIPO car fire wine introductions of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, compolypeptide (II) sequences. (I) is useful as hybridisation probes, compolypeptide (II) sequences, oligomers, and for chromosome compolypeptide are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques compolypeptide in tissue, as molecular weight markers and as expressed sequence tags (II). (II) is useful for generating antibodies against it, detecting or compolypeptide in tissue, as molecular weight markers and as imaging of sites expressing (II). (I) and (II) are useful in medical compolypeptide and polypuncleotide sequences have applications in composition of sites expressing (II). (I) and (II) are useful for treating composities, forensis, gene mapping, identification of mutations composities, forensis, gene mapping, identification of mutations composities for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and composities coding sequences and products dependent on DNA and composities and polypeptide and products dependent on the printed specification, but was obtained in electronic format directly from WIPO at final interval and produce format directly from WIPO at final interval and produce format directly from WIPO at final interval and produce format directly from WIPO at final interval and produce format directly from WIPO at final interval and produce format directly from WIPO at final interval and produce format directly from WIPO at final interval and produce format directly from WIPO at final interval and produce format directly from WIPO at final and pr

The invention relates to isolated polynucleotide (I) and CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC control of (II) are to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as is a cod supplement. (II) and its binding partners are useful in medical classing of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC diagnostics, forensics, gene mapping, identification of mutations in CC diagnostics, forensics, gene mapping, identification of mutations cc responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed captification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 12

                                                                                                                                                                                       capable of detection 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                     Sequence 1406
                                                                                                                                                      The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection
                                                                                                                                                                                                                                                                                                Claim 1; SEQ ID NO 9988; 21pp + Sequence Listing; English.

                                                  Drosophila melanogaster genomic polynucleotide SEQ ID NO 9979.
Drosophila melanogaster
                                    Drosophila;
                                                                                                         ABL19502;
                                                                                                                                                                                          1264
                        pharmaceutical;
                                                                                 26-MAR-2002
                                                                                                                            ABL19502 standard;
                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaccutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                            The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosphila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL0176-ABL30511), expressed DNA sequences (ABL01840-ABL6175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                               Sequence 3593 BP;
                                                                                                                                                                                                                  The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; SEQ ID NO 9979; 21pp + Sequence Listing; English.
